

# Free to choose: Belief in free will and indecisiveness

Michail D. Kokkoris, WU Vienna University of Economics and Business, Austria  
Roy Baumeister, University of Queensland, Australia  
Ulrich Kühnen, Jacobs University Bremen

# Short Abstract

We explore consequences of belief in free will for consumer decision making. Studies 1 and 2 suggest that stronger free will belief is associated with reduced indecisiveness. Studies 3 and 4 show that this beneficial effect of free will belief is limited to consumers with high (vs. low) self-concept clarity.
