

Join the expert community on www.living-innovation.net, share your views and benefit from the experiences of high class lecturers.

Corona will hopefully pass, but **distance teaching and home learning will stay** and gain increasing importance in the near future. Many universities quickly and successfully shifted their courses to distance learning.

Now it is time to take stock, **exchange experiences** and start co-creating the smart universities of the future.

The EU funded project LIVING INNOVATION provides **a vibrant expert forum** for sharing valuable insights, exchange of best practices and effective knowledge transfer.

We mainly target university lecturers, but if you want to co-create innovative distance teaching as a student, you are welcome to join the discussion.

... and discuss with experts on the following topics in the discussion forum

Platforms & systems – your experience with technical systems: pros, cons & limitations

Laboratory courses – your challenges with digital laboratories

Digital didactics – your didactical challenges and recommendations on scope, sequence and sound media-mix

Testing & examination – discussing on digital assessments and privacy issues

Interaction & motivation – about appealing lecturer-students and student-student communication

Success stories – share your best practices with us

Accessibility & inclusion – ensuring that all aspects of your course are accessible by everyone enrolled

Failure stories – help others to avoid the most important pitfalls

... or join our successfully launched webinar series

Join us in the **webinar series** “**Exchange experiences with Distance Teaching**”, where multidisciplinary experts from various fields share their experiences with distance teaching in a live webinar setting with us.

Review **Webinar#1** on **Experience-based Learning in Distance Teaching**

Review **Webinar#2** on **Humor in Distance Teaching**

... and stay tuned for future webinars on www.living-innovation.net
