

Martin Hrusovsky was a research and teaching assistant working at the institute in years 2011-2018. In his research he focused mainly on intermodal transport planning under uncertainty considering uncertainties in travel times and demand. In addition to that, he also dealt with sustainability and combination of economic and ecological objectives in planning. All these factors were taken into account using the combination of optimization models and simulation. Martin also taught bachelor courses with the focus on basics in Operations Management, such as capacity management, inventory management, production planning and demand forecasting.
