

Environmental Guidelines

Protecting and conserving our natural resources through sustainable development is a high priority for WU. With its environmental management system, WU wants to contribute to the conservation of the natural resources required for human life in future generations.

For this reason, WU is committed to raising environmental awareness among its faculty, staff, and students, and provides encouragement and support for them to act in a sustainable, environmentally conscious manner and actively address issues of environmental protection in research, teaching, and other areas. It is very important to us to educate our students to become responsible opinion leaders who spread the idea of sustainable development. WU is also committed to full compliance with the applicable legal regulations, provisions, and requirements for environmental protection. WU's goal is to make contributions to environmental protection and sustainability that go beyond the legal requirements.

WU protects the environment through the economical and efficient use of resources and is seeking to reduce its consumption of materials and increase recycling. WU is committed to sustainability in its workflows and processes and is working to lighten its ecological footprint by reducing emissions, waste, and waste water. WU expects its suppliers and service providers to adhere to the same environmental standards it has set for itself. As far as possible, we encourage our business partners to make the goods and services they supply to us more environmentally friendly.

Within the scope of its activities, WU creates organizational structures that are conducive to the effective implementation of these guidelines, and it is continuously evaluating the success of the measures taken. Comprehensive reporting is performed on a regular basis to document past and future environmental improvements and communicate them to the public.
