

Overtime Registration

Transfer the following verbal description into a BPMN:

- Overtime Registration needs to be requested from an employee in the sales department to the responsible Manager.
- First, the employee needs to create an overtime registration and also needs to send this registration to his Manager.
- Upon receipt of this request, the Manager evaluates/estimates this overtime registration request.
- On this level, the Manager may either decline the registration request and then the employee will receive the declined request, or he may approve the request and at this stage the process ends for both choices.
