

## Posting Stock Withdrawal

Transfer the following verbal description into a BPMN:

- On realizing that a stock withdrawal needs to be posted in SAP by the production department, goods have to be determined from the warehouse.
- After that the employee has to select the inventory management component and post a goods issue.
- To post a goods issue, he has to enter header data for posting & first line item, enter goods and create additional items if needed at the same time.
- After filling the required data, the goods issue has to be saved and the process ends at Posting successfully done.
