

Quality Inspection

Source: [Sche98, p. 316], adapted by Farid El Masri, adjusted by Martin Roshkev

Transfer the following verbal description into an EPC:

- a) When a production step is completed or a random sample taken, the quality control department (QC Dept.) performs a quality inspection. To perform this operation an inspection plan and the product data are needed.
- b) If the results are satisfactory, please proceed to c). If the results are unsatisfactory, then the manufacturing department needs to correct the production process and after that to rework the defective parts (QC and PP are used).
- c) Finally, the results are reported to manufacturing control.
