# DATASTREAM NAVIGATOR **ENHANCEMENTS - EXTENDED SET OF FILTERS**

# **RELEASE NOTE (VERSION 4.6)**

This new release of Datastream Navigator (4.6) sees the addition of many new filters for every data category, to facilitate finding the series required for your analysis. These filters now include the majority of the fields that were available in the earlier version of Navigator with the 'Criteria Search' interface, such as the facility to search explicitly for active or dead series, to filter the series just to display those that have a start date on or before a set year, and to find those equities that are in a selected sector or sectors. The following are examples of where these new filters can help when searching for series in these different data categories.

#### Searching for Equities

These enhancements to the filters now enable you to search, for example, for Active UK equities that are the Major Securities (and Primary Quote) and that are in a set of Sectors, (using the new Activity, Security and Sector filters).

Date of issue: 10 March 2017

### Searching for Equity Indices

In this example, as well as using the Activity filter, the Base Date (Equals/Before) has been used to filter to only display series with a base date of 1980 or earlier, and the Datatypes filter has been used to select only the indices with the Dividend Yield datatype. Note: this Base Date filter operates on the default datatype (Price Index for Equity Indices) – rather than the Datatype if selected

### Searching for Economics series

For Economics series, where there are now nearly 10 millions series to select from in Navigator, the additional fields allow you to search, for example, for forecast series, and set a date for how far out in the future the series should have forecast values.
